Abdillah Haidar Mahendro

Backend Developer, Infrastructure Engineer

Bekasi, West Java, Indonesia | abdil.haidar17@gmail.com | 0889-7766-4271 | x-hozmi.github.io

Abdillah Haidar Mahendro | X-Hozmi

About

Backend engineer with hands-on depth across the full infrastructure stack — from designing Laravel-based APIs and payment-system integrations to owning the servers, databases, and deployment pipelines those systems run on. Comfortable moving between application code and the Docker, networking, and monitoring layers beneath it, with a track record of taking a legacy monolithic platform through a full containerized, multi-server production migration. Flutter remains a complementary skill for contributing to mobile front-ends when a project calls for it.

Experience

PT Energi Pelabuhan Indonesia, Data Management & IT Staff — North Jakarta, Indonesia
Jan 2023 – present
3 years 8 months

- Modernized the company's internal ERP system on Laravel 13, improving long-term maintainability and scalability.
- Built backend services compliant with the SNAP API standard, a bank-driven specification for standardizing communication between digital payment systems.
- Led the migration from a monolithic system architecture to a containerized Docker setup, enabling flexible deployment across multiple environments and servers.

Education

S.Kom Bani Saleh University, Informatics Engineering — Bekasi, West Java, Indonesia
Sept 2022 – Sept 2026

- GPA: 3.74/4.00
- Thesis: Comparative Analysis of N-Gram and Locality-Sensitive Hashing Algorithms in a Fuzzy Searchable Encryption Scheme for Cloud-Based Medical Record Databases

Projects

UBS LaTeX Template — June 2025 – present

Streamline the writing of proposals and final project reports for undergraduate Informatics Engineering students at UBS

- Standardized the academic document workflow for undergraduate Informatics Engineering students at Universitas Bani Saleh, providing consistent templates for proposals, final reports, and journal publications
- Designed a modular LaTeX architecture separating document metadata, chapter content, supplementary sections, bibliography, appendices, and immutable template components for maintainable academic documents
- Implemented a unified LaTeX template supporting multiple academic publication modes, allowing users to switch between Proposal, Final Report, and Journal outputs from the same project structure
- Established a cross-platform academic writing workflow supporting TeXstudio, VS Code with LaTeX Workshop, and Overleaf, with documented compilation recipes for LaTeX, XeLaTeX, BibTeX, and latexmk
- Integrated academic reference management and reusable writing components with BibTeX, APA-style journal formatting, figures, tables, equations, citations, source code, and appendices

Laravel API SNAP Jan 2024

A bank-driven specification for standardizing communication between digital payment systems

- Implemented a Bank Indonesia SNAP-compliant B2B Virtual Account payment gateway, covering standardized authentication, VA inquiry, payment processing, response structures, and error codes
- Implemented multi-layer API security combining OAuth 2.0 Client Credentials, RSA-SHA256 asymmetric signatures, HMAC-SHA512 symmetric signatures, timestamp validation, and scoped client authorization
- Engineered Redis-backed idempotency and transaction consistency controls to prevent duplicate payments, handle retries safely, and detect conflicting payment requests
- Designed asynchronous payment settlement workflows using Laravel Jobs and Redis queues, preventing payment settlement workloads from blocking the main API request lifecycle
- Built privacy-aware API audit logging capturing request/response metadata, processing latency, status codes, and sanitized payloads while automatically redacting sensitive authentication data

Certificates

- Belajar Dasar Git dengan GitHub
- Belajar Prinsip Pemrograman SOLID
- Belajar Jaringan Komputer untuk Pemula
- Menjadi Linux System Administrator
- Belajar Implementasi CI/CD
- Belajar Fundamental Back-End dengan JavaScript
- Menjadi Back-End Developer Expert dengan JavaScript
- Menjadi Flutter Developer Expert
- Menjadi Google Cloud Engineer
- Menjadi Google Cloud Architect
- Belajar Membangun Arsitektur Microservices

Skills

Languages: PHP, Dart, TeX, Python

Backend Frameworks: Laravel, Codeigniter 3

Multi-Platform Frameworks: Flutter

Database & Caching: MySQL, PostgreSQL, Redis

Infrastructure: Docker, GCP, NginX, Ubuntu

Monitoring: Prometheus, Grafana, Sentry, Cloudflare

Soft Skills

- Continuous Learning
- Attention to detail
- Analytical Problem Solving
- Crisis Management
- Translational Communication
- Task Prioritization
- Collaboration & Empathy
